# CHIPSPREADER

CHIPSPREADER FOR SURFACE DRESSING AND SPECIAL APPLICATIONS

# Truck body mounted CHIPSPREADER

*The truck body mounted CHIPSPREADER is the most profitable and versatile machine for surface wear grit spreading work.*

*They are compliant with 12271 standard requirements.*

*These CHIPSPREADER can be fitted to all types of truck. They are easy to detach and attach from the truck, freeing it up for other applications.*

Several models of CHIPSPREADER are available:

ARENA 320 is a CHIPSPREADER with a distributing roller. It is adapted to all types of work.

- Helmet shaped hatches allowing a clean cut-off.
- spreading width 3.20 m
- 14 separate hatches controlled from the walkway or the cabin (option)

WK is a gravitational type CHIPSPREADER adapted to spreading all types of material including gravel.

GPB 14 000 is a CHIPSPREADER with an extraction roller and dosage blades. This chipspreader is recommended for coating work. Its main advantage is to allow even longitudinal spreading whatever the truck body slope.

- The extractor roller is coupled to the vehicle movement speed
- Spreading width 3.20 m
- 14 separate hatches controlled from the walkway or the cabin (option)

## Automatic CHIPSPREADER and safe manual work

*CHIPSPREADER with a distributing roller can be fitted with a dosing computer. A materials box is also possible to carry out manual work safely from the ground.*

### The GRAVIDOS computer for automatic dosing

The ARENA 320 CHIPSPREADER can be fitted with a dosing computer. It regulates the quantity of gravel spread depending on the following parameters:

- required dosage in litres/m<sup>2</sup>
- vehicle speed detected by radar
- gravel size
- truck body and truck slope

### Manual work

Whatever the work configuration, manual work is often required when the truck is not able to do it.

The ARENA 320 CHIPSPREADER can optionally be fitted with a materials box at the back of the vehicle allowing the operatives to work safely from the ground.

# The wide CHIPSPREADER and specific applications

*The SUPER ARENA 450 CHIPSPREADER allows spreading at up to 4.50 m. Its conveyor body makes it possible to work without raising the truck body. The grit spreading design is of the “auto spreader” type. Spreading is carried out using two telescopic containers.*

*PGR 6000 is a rear truck body door fitted with a conveyor belt allowing to lay hot mix or any other type of materials.*
